

SLC BINOCULARS

With their reliable, high-quality optical system and rugged construction, the SLC binoculars are among the world's most popular high-end binoculars. The thumb rests on the underside and the depressions on the top side of the easy to handle rubber armoring ensure secure and comfortable handling. The diversity of models among the SLC binoculars offers the right solution for every purpose.

In the SLC series, Swarovski Optik uses high-quality technologies such as the SWAROBRIGHT coating for maximum color fidelity across the whole light spectrum or the SWAROTOP and SWARODUR coatings for bright, high-contrast images.

The non-stick effect of the SWAROCLEAN coating on the outer surface of the lens makes cleaning objective and eyepiece lenses considerably easier, above all when removing dried-on mineral residues (e.g. water marks due to condensation), insect repellents and tree resin. The lenses require less intensive cleaning which significantly increases the longevity of optical products.

SLC 56

The large 56 models show off their strengths particularly when used in adverse light conditions and are thus excellent for observation in the transition period between dusk and night.

448-00192 15x56

SLC 50

The SLC 50 models are characterized by a wide application range due to their 7x, 8x and 10x magnification features. The high-performance binoculars with their high-quality 50 mm objectives with excellent light-gathering qualities ensure optimum observation even when light conditions are poor.
