

Whether it's going from safe to scabbard or Alabama to Wyoming a synthetic stock can do a lot for the shooter and a successful hunt. The Excalibur features a spiral fluted bolt and fluted barrel in a light dampening matte finish. The stock is made by Bell and Carlson and features an aluminum bedding block and Cooper Arms own unique color. The stock itself is constructed using a "hand lay-up" process, using a variety of "composite" materials including fiberglass, aramid fibers, graphite, epoxy gel coats and laminating resins that is then precision milled.

Model 52

Caliber: 280

Barrel: 1.150 x .660 x 24" blued 4140

Twist Rate: 1 in 10

Action: 3-front locking lug bolt action magazine fed repea...
